

Know How in No Time: 3 Ways to Control Bugs & Insects

Here are three simple ways to keep bugs and insects under control and out of your space.

In the Yard

You can apply lawn granules with a spreader, water the area and the insect killers starts working.

- *Ready-to-use sprays make it easy to get to the lawn bugs hanging out on shrubs and plants, around porches and wood piles.*

Around the House

Create a perimeter around your home to help keep common insects and bugs from getting indoors.

- *Apply a pesticide about 1 foot above ground level and in a 12 inch border on the ground around your foundation.*
- *Spray about a 4-inch band inside, where insects or entry points are present.*

On Contact

When you see insects like ants, roaches or wasps – you can deal with the problem using traps, baits and killing sprays.

- *Place them in the areas where the insects are traveling like. under sinks, or in damp, dark corners.*
- *When treating wasp or hornet nests, use a pressurized spray that lets you keep your distance. If you can, treat a nest at night when the insects are inactive.*

HELPFUL TIPS:

- *Keep screens repaired and seal up openings around doors, windows, pipes and the foundation.*
- *Pay attention to the product's instructions. Not only will this help prevent harm to plants, water supplies, pets and people. It'll prevent wasted time.*
- *Many pesticides won't work below 50 degrees or above 80 degrees for example - and some are activated by watering while others won't work once they're wet. You want to know how and when to use the product.*
